This game could be so good. I like the art work and the concept while not particularly innovative is cool and interesting. However please please please, devs, if you're reading this, fix the jump controls. If you're next to a wall, you can't jump, and if you try to jump 2 blocks you'll often just end up running on the side of the block. Maybe the engine doesn't let you decide how the mechanics work, however just increasing the jump height by like 20% would make most jumps clearable, the difficulty should be the puzzles, not the controls.. I played this game originally on a different site. When I saw it offered on Steam with a chance to demo the sequel, I jumped at the chance to support the developers and get a sneak peek at what's coming. It's a great game. I just finished playing it again. I like it even better without the hidden objects. It's suspenseful with very well done cut scenes. I can't wait to get the new game when it's released. It's by far the best casual game I've played to date.. very fun if you wanted to waste time but its also very fun just for how its made and you could also get vacation simulator made by the same dev.. A fun endless runner game, not as easy as I thought. I recommend buying when on sale.. Love it. Quick little survival horror game that you can afford to mess up on but still lets you spend hours sneaking around if you're too afraid to go in guns blazing.

This game was released April 30th, 2016. It looks like it was made April 30th, 2004. 10/10 would waste another half hour in the first dungeon again.. Played this game in full 12 player lobbies where we were all on voice comms together. Mini golf with friends, as you'd expect, is a hilarious and great time. The game's price tag (\$6) is a good price, especially when more courses/modes get added. You can also join open lobbies and play golf with strangers on the internet; this is a game that should be played with other people.. Reminds me of those mobile games I do not like. Also I'm really terrible at this, which hardly makes anything any better. It's like bejeweled with a twist, kind of. Not my cup of tea.. offline sim :l. This game is Not what i hoped it to be i expected atleast base building and the first Level of this game Is the A.I Storming you with nothing but Vechials treating you like you've played this game before i don't recommend this game a matter of fact you can play a game that is similar in every way here FOR FREE!

This game is esstitaly shendez with a graphical and sound update

<http://www.crazymonkeygames.com/Shadez.html>. When I first started working with music making programs creating a nice drum line was the most difficult part. Other programs offered all the capabilities, but each program was like wandering a maze at night. Even with extensive tutorials online by both the creators and the various users whom used said programs. It still took at least an hour for me to even begin to create a simple drum line, and when I had finally figured out the controls I had lost interest in the drum line I was thinking of. When I finally stumbled upon this program I couldn't believe my eyes. I quickly installed the demo and from there on I was in love. Everything was so simple! No more maze like interfaces, no more having trouble getting the correct timing, no more problems! I still cannot believe how easy this program is to use! Sure it's not as advance, but who gives a flying f%k when you can easily create a beat in as much as five minutes. As a musician with no drum capabilities, or the space to own a midi drum set if I wanted; this program resolves all those issues. Now I can (in less than five minutes) open up this software and create a very catchy beat. I highly recommend this software to anyone interested in music (particularly the drum aspect).. Best \$4 spent all year.. fun cheap game. I decided to update my review to explain why I do not recommend this game:

[the game simply doesn't have any depth, you do a mission which consist at pointing your satellite towards the objective \(and it does it for you on its on\), you wait, and you repeat the same next mission.](#)

[Then after some time you reach a point where you have to give an orbite to your satellite in order to do the mission \(which will be again pointing at stuff\).](#)

[And that's it.](#)
