ny-admin, it's very weird indeed: thanks for the help. just as i was about to give up, i got it to work on my radeon sdr5050 pci-p now at least i can see where the device is :) ny-admin, have fun hi i'm having problems installing 16.04 on my macbook, i can't get past the partitioning stage in the installation i can't get any usb drives to mount on ubuntu is there some additional package i have to install the following packages have weird dependencies: libusb-1.0-0-dev (>=2:1.0.16) but it is not going to be installed usb drivers that is guys, just installed ubuntu 16.04, it works fine but when i try to change my mouse cursor theme, nothing happens. Here's the log sorry for the long log, i'm still learning xchat Ubuntu has never been this buggy for me. i'm doing an install that will be running a bunch of different things for the first time. hello i have a problem with an Nvidia card on my laptop streyn, what's the issue exactly it has always been there, but recently it have started showing a problem when i login to my desktop as soon as i open my desktop it begins to freeze this does not happen with windows streyn, ok, is this a new installation streyn, what version of ubuntu are you using? i'm not sure, it has always been there 16.04 streyn, ok, are you using a different g 821574746f6af
